

Tusked frog *Adelotus brevis*

Photo : Queensland Museum

- Up to 50mm long this frog lives in rainforests and wet sclerophyll forests.
- It can be found at the water's edge along streams and in pools nearby. Sometimes the males call from dams and temporary soaks on the flood plain as well as man-made ponds.
- This frog looks very like the cane toad – look for the red patches inside the groin and in the calf area.
